# 现代操作系统应用开发实验报告

**学号:** 15331418 **班级 :** 晚上班

姓名: 郑柏川 实验名称: Live Tiles & App to App Communication

## 一.参考资料

参考的 ppt

#### 二.实验步骤

#### 磁贴的设计:

其中在 text 标签加内容:

```
foreach (TodoItem item in ViewModel.AllItems)
{
   int count = 0;

   // small
   ((XmlBlement)texts[count]). InnerText = item.title;
   count++;

   // medium
   ((XmlBlement)texts[count]). InnerText = item.title;
   count++;
   ((XmlBlement)texts[count]). InnerText = item. description;
   count++;

   // wide
   ((XmlBlement)texts[count]). InnerText = item.title;
   count++;
   ((XmlBlement)texts[count]). InnerText = item. description;
   count++;
   ((XmlBlement)texts[count]). InnerText = item. date. ToString();
   count++;

   TileNotification notification = new TileNotification(xmlDoc);
   updatemanager.Update(notification);
}
```

分析:对列表中的每一个 todoitem 都创建对应的 tilenotification 并更新

#### 分享的实现:

先找到对应的 item:

```
private void ShareButtonClick(object sender, RoutedEventArgs e)
{
    //找到要分享的item
    DataTransferManager.ShowShareUI();
    ViewModel.SelectedItem = ((MenuFlyoutItem)e.OriginalSource).DataContext as TodoItem;
}
```

这样就定位到 selecteditem 了,然后创建 DataPackage 类的 data 对象,并将一个

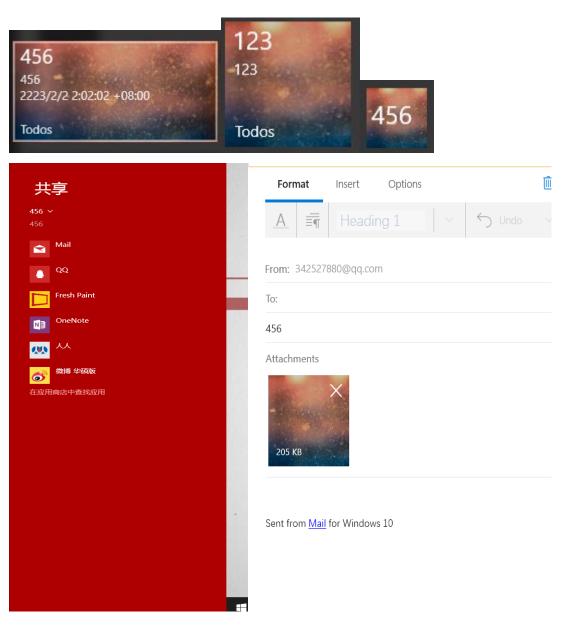

### 一个属性放入

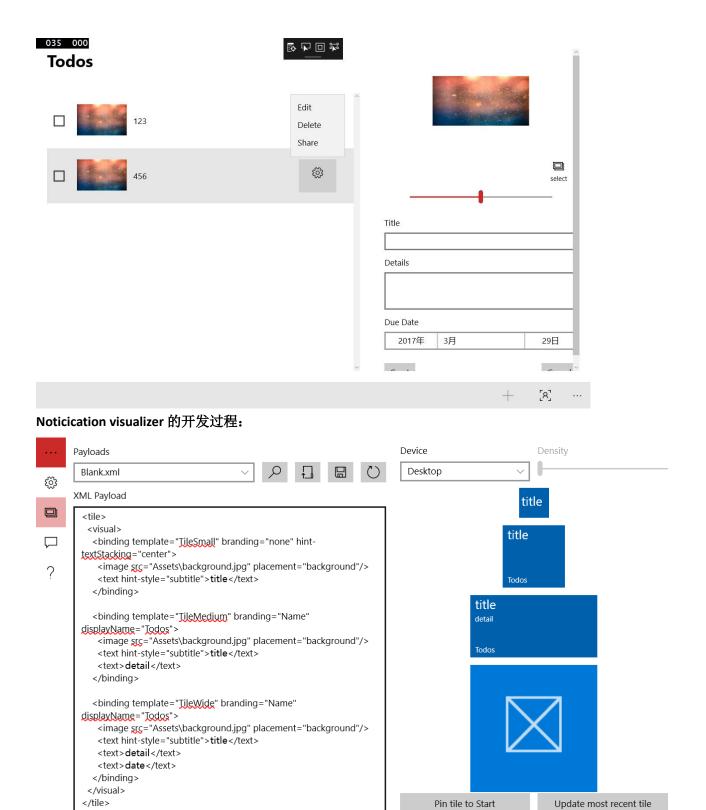

```
//所要传输的数据
DataPackage data = args. Request. Data;
if (ViewModel. SelectedItem != null)
{
    //为数据添加值
    string textTitle = ViewModel. SelectedItem. title;
    string textDescription = ViewModel. SelectedItem. description;
    data. Properties. Title = textTitle;
    data. Properties. Description = textDescription;
}
else
{
    //在侧边拿数据
    data. Properties. Title = title_grid. Text;
    data. Properties. Description = description_grid. Text;
}
```

### 再实现图片的分享:

```
| DataRequestDeferral GetFiles = args. Request. GetDeferral();
| try | {
| StorageFile imageFile = await Package. Current. InstalledLocation. GetFileAsync("Assets\\background. jpg");
| data. Properties. Thumbnail = RandomAccessStreamReference. CreateFromFile(imageFile);
| data. SetBitmap(RandomAccessStreamReference. CreateFromFile(imageFile));
| finally | {
| GetFiles. Complete();
| }
```

# 三.实验结果截图

### 四.实验过程遇到的问题

图片问题还是用上一次保存图片用的 api 一致

Tile 的制作一开始照着 ppt 打就行,分享部分也是一样

# 五.思考与总结

还是要多看群,例如分享的 item 定位就是看到群里一位大神贴的代码,之前是用 id 定位的
